Turfgrass Rootzones. Richard L. Duble, Turfgrass Specialist. Texas Cooperative Extension. Text and images copyright © Richard Duble. Turfgrasses are grown on many types of substrates - gravel, sand, silt, clay, organic or combinations of these components. These components form a matrix (a rootzone) that is characterized by specific physical, chemical and biological properties.

Turfgrass Rootzones - Aggie Horticulture

Based on the author's thirty years of research, Turfgrasses presents a thorough discussion of more than one hundred varieties and twelve species of warm-season turfgrasses. Chapters explain the basic biology of turfgrass growth from seed to maturity and review each type of turfgrass, giving its origin, area of adaptation, use, management, and unique characteristics.

soil stabilization, water conservation, and filtration of air and water borne pollutants. Actively growing turf is highly effective in control of environmental pollution, such as the suppression of dust, glare, and noise, and in heat dissipation, especially in the arid and semi-arid regions of the United States.
