Chapter 16 worksheets - SlideShare

What is Charles Darwin Theory. The English naturalist Charles Darwin (1809-1882) had developed the Darwinism theory in biological evolution and others, stating that through the natural selection of small, inherited variations that increase the individual's ability to compete, survive, and reproduce, all species of organisms arise and develop. This theory is also known as Theory of evolution.

Charles Darwin Theory - Theory and Importance

452 Chapter 16 Lesson 1 Equator Hood Species Vary Locally There were other puzzles, too. For example, Darwin found two species of rheas living in South America. One lived in Argentina's grasslands and the other in the colder, harsher grass and scrubland to the south. Darwin noticed that different, yet
